

REMARKS

To further prosecution of the present application, Applicant has amended herein Claims 27-31, 33-36, 40-41, 43-49, 54, and 59-61, and has cancelled herein Claims 62-63. The amendments to the Claims have been made to clarify the respective inventions recited therein. The foregoing amendments do not add subject matter and have antecedent basis. Applicant respectfully requests reconsideration.

In addition, Applicant has added herein to the present application new Claims 64-72 with Claims 64, 66, and 68 in independent form.

Rejection of Claims 62 and 63 Under 35 U.S.C. § 112

The Examiner has rejected Claims 62 and 63 under 35 U.S.C. § 112, first paragraph, as containing subject matter that is not described in the specification in such a way to reasonably convey to one skilled in the relevant art that the inventor has possession of the claimed invention at the time the application was filed. More specifically, the Examiner has indicated that newly added dependent Claims 62 and 63 recite new matter and therefore are rejected. Applicant has cancelled herein Claims 62 and 63 and respectfully requests withdrawal of the rejection.

Rejection of Claims 60, 27-29 and 36 Under 35 U.S.C. § 112

The Examiner has rejected Claims 60, 27-29, and 36 under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which Applicant regards as the invention. The Examiner has indicated that these Claims contain the terms “primary life insurance” and “secondary life insurance”, although such claim limitations do not have sufficient antecedent basis. Applicant has amended herein Claims 60, 27-29, and 36 to remove the word “life” from these limitations in order sufficient antecedent basis is provided by the independent claim from which these Claims depend. In addition, Applicant has amended other claims in the present application for the same reasons in order to clarify the invention. Applicant respectfully submits the limitations of Claims 60, 27-29, and 36 now have sufficient antecedent basis and respectfully requests withdrawal of the rejection.

Rejection of Claims 27-30, 36, 44-45, 51-54, and 59-61 Under 35 U.S.C. § 102(e)

Claims 27-30, 36, 44-45, 51-54, and 59-61 have been rejected under 35 U.S.C. § 102(e) as being anticipated by U.S. 5,873,066 issued to Underwood ("Underwood"). Applicant respectfully traverses the rejection of the Claims as being anticipated by Underwood for the reasons given below.

Applicant respectfully submits that independent Claims 59, 60, and 61 are not anticipated by Underwood.

Underwood is directed to a computer-implemented system for an insurance company to underwrite, quote, and bind an excess casualty insurance policy for an insured that has a primary insurance policy with a primary insurance limit amount. (Abstract; col. 2, lines 10-14). A user logs onto a software system (100) and enters into the system information related to an insured, a primary insurance carrier, a primary benefit limit and other information. (col. 2, lines 17-18). In particular, the user would enter a description of the insured's operation, such as a business operation, and SIC code(s) that is/are associated with the insured's operation or business. (col. 4, lines 18-20). In addition, SIC code(s) may be entered into the system that identifies a primary carrier name, or multiple carrier names, with whom the insured is associated. (col. 2, lines 15-17; col. 4, lines 18-20; and col. 7, lines 43-46). "SIC" or standard industrial classification codes were originally used for the federal census to identify types of business and commercial operations. Such SIC codes are also used, in at least one other instance, by the U.S. Securities and Exchange Commission to identify a company's type of business. Attached to this response as Exhibit A is an SIC Code List that is published by the U.S. Securities and Exchange Commission and can be retrieved via the URL www.sec.gov. Insurance companies are identified by SIC codes to indicate the type of insurance an insurance company provides. For example, SIC code 6399 refers to "Insurance Carriers, Nec", and SIC code 6331 refers to "Fire, Marine & Casualty Insurance", and SIC code 6321 refers to "Accident & Health Insurance". One or more SIC codes are entered into the system (100) to identify an insured's type of business or

operation and also to identify the type of insurance carrier in terms of the kind of insurance the carrier provides.

The user then enters into the system (100) the type of insurance coverage and the coverage limit(s) of the primary insurance policy that will underlie the excess casualty insurance policy that the system is determining and may eventually quote and bind. (col. 4, lines 25-27).

In addition, the system retrieves public bureau rating information associated with the primary insurance carrier name that the user entered into the system (100). The system is associated with a database that stores public bureau rating information records, including rating codes that represent the financial stability ratings that are associated with primary insurance carriers. (col. 2, lines 24-29; col. 4, lines 45-47; col. 8, lines 1-7). The system retrieves from the database the public bureau rating information associated with the primary insurance carrier name the user entered into the system. The system then compares the stored rating code to a predetermined minimum financial rating threshold, or, in other words, an acceptable rating level, established by the insurance company quoting the excess insurance policy. (col. 2, lines 29-33; col. 4, lines 41-43 and 48-52; and col. 8, lines 8-12). If, as a result of the comparison, the rating of the primary insurance carrier is below the predetermined threshold or rating level, the system can decline to issue the quotation for the excess policy. (col. 2, lines 33-35; col. 4, lines 52-57; and col. 8, lines 13-15).

The SIC codes are stored in the database in corresponding SIC code records that are linked to underwriting instructions and guidelines which are established and filed by the insurance carrier that is quoting the excess policy. The underwriting instructions and guidelines relate to minimum premiums, hazard rating instructions, underwriting authority and referral criteria corresponding to each SIC code the user might enter into the system. (col. 2, lines 18-24; and col. 5, lines 8-15). The system also includes means for retrieving from the database an SIC code record that corresponds to an SIC code associated with the insured, and for displaying stored hazard rating information that corresponds to the SIC code record. (col. 8, lines 15-18). Such means also displays the hazard rating information to an underwriter of the insurance carrier of the excess policy. (col. 2, lines 37-39).

Applicant respectfully submits Underwood does not disclose each and every element of Claim 59, as required to anticipate the invention recited therein. In addition, Applicant respectfully submits that, in contrast to the invention of Claim 59, Underwood is directed to a system for underwriting, quoting and binding an excess casualty insurance policy that requires the insurance carrier providing the excess policy, or the secondary insurer, to underwrite the excess or secondary policy.

As disclosed in Underwood, the excess casualty policy the computer-implemented system provides includes coverage that is only invoked when the insured's liability exceeds the limit of the underlying primary policy. As discussed in the "Background" section of Underwood, an insured may have a primary insurance policy with a coverage limit of \$10 million, and an excess insurance policy that covers losses in excess of the \$10 million up to some limit, such as, for instance, \$20 million. The excess policy is said to have an "attachment point" of \$10 million because the coverage of the excess policy is not invoked unless the insured's liability exceeds the \$10 million limit covered by the primary policy. (col. 1, lines 24-28 and lines 29-33).

The Underwood system that provides the excess insurance policy is different from and contrasts with the computer-implemented method of Claim 59 and the secondary insurance policy produced therefrom. More particularly, the method of Claim 59 provides additional insurance or a secondary insurance policy that is *independent in effect from and without affect to said primary insurance policy and any benefits of said primary insurance policy . . . creating an obligation of said secondary insurer to pay said secondary benefit amount independent of said primary insurance policy and any benefits of said insurance policy*. Unlike the computer-implemented method of Claim 59 and the secondary insurance policy produced therefrom, the system of Underwood produces an excess casualty policy that is dependent on the liability coverage limit of the primary insurance policy. In addition, the excess casualty policy would only provide benefits in the event the insured's liability is paid under the primary insurance policy and exceeds the primary coverage limit. In other words, Underwood discloses an excess liability policy having attachment points linked to the coverage limit of a primary insurance policy, whereas Claim 59 is directed to a method of providing an additional or secondary insurance policy where the secondary insurance policy is *independent in effect from and*

without affect to the primary insurance policy. The additional or secondary insurance policy creates an obligation of the secondary insurer to pay the secondary benefit amount independent of the primary insurance policy and any benefits of the primary insurance policy (or, in other words, is a secondary policy without limitations associated with the payment of the secondary benefit amount). An insured covered under a secondary insurance policy produced via the computer-implemented method of Claim 59 could therefore receive benefits from both the primary insurance policy and the secondary insurance policy in the event of a loss without the coverage limit of the primary policy being paid or exhausted before the payment of the benefit amount provided by the secondary insurance policy. As indicated in the application specification, an object of the invention is to provide additional insurance via a secondary policy to, for instance, increase the total benefit amount available to an insured for a loss that is also covered under a primary policy.

In addition, Claim 59 is directed to a computer-implemented method comprising: *processing and converting said input data into said output data includes determining whether said one or more underwriting standards meets one or more criteria said secondary insurer applies to determine if said secondary insurer can rely upon said underwriting approval of said select primary insurer for said primary insurance policy to provide said secondary insurance policy; and, if said secondary insurer can rely upon said underwriting approval of said primary insurer to provide said secondary insurance policy, generating, as part of said output data, an indication of acceptance of said one or more persons for said secondary insurance policy.*

In other words, the computer-implemented method of Claim 59 determines whether one or more underwriting standards that the primary insurer uses to provide an underwriting approval meets one or more criteria the secondary insurer applies to determine whether it may rely upon the primary insurer's underwriting approval to provide the secondary insurance policy. If the secondary insurer determines it can rely upon the primary insurer's underwriting approval, an indication of acceptance of the one or more persons for the secondary insurance policy is generated. The secondary insurer therefore is not underwriting the secondary insurance policy, but, rather, is relying upon the underwriting approval the primary insurer provides for the primary insurance policy.

Claim 59 embodies another object of the invention to provide additional insurance for a risk without performing an underwriting evaluation, but by relying upon the underwriting approval of a primary insurer for a primary insurance policy and thereby avoiding underwriting costs. As a result, underwriting cost savings are passed on, for instance, to the insureds as reduced premiums for the secondary insurance policies.

In contrast, Underwood discloses a computer-implemented system that uses one or more SIC codes to identify the insured's type of business or operation and to identify the name of the primary insurance carrier in order to retrieve stored SIC code records. The SIC code records are associated with underwriting guidelines and instructions established and filed by the insurance carrier providing the excess or secondary insurance policy that are displayed for an underwriter, indicating the insurance carrier of the excess or secondary insurance policy is performing an underwriting evaluation. (*See*, col. 2, lines 18-22 and lines 37-38). Therefore, in contrast to Claim 59, the disclosed Underwood system requires the insurance carrier providing the excess (or secondary) insurance policy to perform an underwriting evaluation.

Further, in contrast to Claim 59, the Underwood system uses public bureau ratings that represent the financial stability of primary insurance carriers in order for the excess insurance carrier to compare such ratings with its predetermined rating level or threshold to determine whether to decline to provide quotations for excess policies. If the Underwood system determines a primary insurance carrier falls below the predetermined rating or threshold, a quotation for an excess policy is declined. In the Office Action, the Examiner appears to relate this disclosure of Underwood to the limitation of the previously presented Claim 59 that was directed to *determining whether said one or more underwriting standards [of said primary insurer] meets one or more criteria said secondary insurer applies to determine if said secondary insurer can rely upon said underwriting evaluation of said select primary insurer performed for said primary insurance policy to determine the eligibility of said one or more persons for said secondary insurance policy*. However, Applicant respectfully submits that, as recited in amended Claim 59, determining whether underwriting standards of a primary insurer meets one or more criteria a secondary insurer applies to determine if it can rely upon the underwriting approval of the primary insurer for the primary insurance policy to provide

the secondary insurance policy is not a comparison of the financial rating of a primary insurance carrier with a predetermined rating or threshold a second insurance carrier uses to determine the financial stability of the primary insurance carrier. Such a comparison involves determining the financial stability of the primary insurance carrier and not determining whether the secondary insurance carrier can rely on the underwriting approval of the primary insurance carrier. Applicant respectfully submits that the excess policy system of Underwood would necessarily rely upon the financial stability of the primary insurance carrier, to pay the primary coverage limit of the primary policy, in order for the excess insurance carrier to to underwrite an excess policy to provide coverage in excess of the primary coverage limit (or after the primary policy benefit is paid). Claim 59 is directed to providing additional insurance as a secondary insurance policy that creates an obligation of the secondary insurer to pay a secondary benefit amount independent of any benefits of the primary insurance policy.

Applicant respectfully submits the computer-implemented method of Claim 59 and the system of Underwood are patentably distinct and produce different secondary insurance policies. In addition, Applicant respectfully submits that the computer-implemented method of Claim 59 relies upon the underwriting approval of the primary insurer for the secondary insurer to provide the secondary policy, while the system of Underwood relies upon the underwriting the secondary insurer performs using the secondary insurer's established underwriting instructions and guidelines to provide the secondary policy.

Thus, Underwood does not teach each and every element of Claim 59 and thereby does not anticipate the invention recited therein. Accordingly, Applicant respectfully submits Claim 59 is patentably distinct from Underwood and respectfully requests withdrawal of the rejection of Claim 59 under § 102(e).

Claims 27-49 depend from Claim 59 and are patentable for at least the reasons given above. The rejection of Claims 27-49 therefore should be withdrawn.

Similarly, with respect to independent Claims 60 and 61, Applicant respectfully submits, for the same reasons given above, Claims 60 and 61 are not anticipated by Underwood. Underwood does not teach each and every element of Claims 60 and 61.

In particular, for the reasons given above with respect to Claim 59, Underwood does not teach at least the limitation of the insurance system of Claim 60 directed to *said broker computer being programmed to determine whether one or more underwriting standards, said select primary insurer uses to provide said underwriting approval, meets one or more criteria said secondary insurer applies to determine if said secondary insurer may rely upon said primary insurer's underwriting approval to provide said secondary insurance policy; and said broker computer being programmed to generate, as part of said output data, an indication of acceptance of said one or more persons for said secondary insurance policy, if said secondary insurer determines it may rely upon said underwriting approval of said primary insurer.*

Similarly, for the reasons given above with respect to claim 59, Underwood does not teach at least the limitation of the method of Claim 61 directed to *determining whether said one or more underwriting standards said primary insurer uses meets one or more criteria a secondary insurer applies to determine whether said secondary insurer can rely on said primary insurer's underwriting approval, of said one or more persons for said first insurance policy, to provide said second insurance policy; and, if said secondary insurer can rely on said primary insurer's underwriting approval of said one or more persons for said first insurance policy, providing information to define said second insurance policy.*

In addition, as discussed above with respect to the secondary insurance policy produced via the computer-implemented method of Claim 59, the secondary and second insurance policy produced via the insurance system of Claim 60 and the method of Claim 61, respectively, creates *an obligation of said secondary insurer to pay said secondary benefit amount independent of said primary, or first, insurance policy and any benefits of said primary, or first, insurance policy.* Further, with respect to Claim 61, the secondary insurance policy is *independent in effect from and without affect to said first insurance policy.*

Thus, Underwood does not teach each and every element of Claims 60 and 61 and thereby does not anticipate the inventions recited therein. Accordingly, Applicant respectfully submits Claims 60 and 61 are patentably distinct from Underwood and respectfully requests withdrawal of the rejection of Claims 60 and 61 under § 102(e).

Claims 51-54 depend from Claim 60 and are patentable for at least the reasons given above. The rejection of Claims 51-54 therefore should be withdrawn.

Rejection of Claims 31-36, 37-43, 46-47, 48-49 and 62-63 Under 35 U.S.C. § 103(a)

Claims 31, 62, and 63 have been rejected under 37 U.S.C. § 103(a) as being unpatentable over Underwood. Claims 32-35, 37-43, and 46-47 have been rejected under 37 U.S.C. § 103(a) as being unpatentable over Underwood as applied to Claims 59 and 36 above and further in view of Ryan. Claims 48 and 49 have been rejected under 37 U.S.C. § 103(a) as being unpatentable over Underwood as applied to Claim 59 and further in view of Pescitelli. Claims 62-63 have been cancelled herein. Applicant respectfully traverses all rejections of these Claims under 35 U.S.C. § 103(a).

With respect to independent Claim 59, Underwood, alone or in the cited combination with Ryan or Pescitelli, does not achieve the invention recited in Claim 59 for at least the reasons given upon with respect to Underwood. In addition, Applicant respectfully submits that neither Underwood, alone or in the cited combination with Ryan or Pescitelli, provides a teaching or suggestion that would motivate one of ordinary skill in the art to modify the excess insurance system of Underwood to achieve the invention of Claim 59.

Thus, Applicants respectfully submit that Claim 59 is not obvious in view of Underwood, alone or in combination with Ryan or Pescitelli. Accordingly, Applicant respectfully requests withdrawal of the rejections of Claim 59 as noted above.

Claims 31-35, 37-43, 46-47, and 48-49 depend from Claim 59 and are patentable for at least the same reasons given above. Withdrawal of the rejection of these Claims is therefore respectfully requested.

Patentability of New Claims 64-72

New Claims 64-72 include independent Claims 64, 66, and 68. New Claims 64-72 are patentable over the prior art of record because such prior art does not anticipate nor render obvious the inventions recited therein.

The prior art of record does not disclose the computer-implemented method of Claim 64 and, in particular, does not disclose, nor teach or suggest, at least the limitations

directed to: *providing a computer configured for receiving input data and for processing and converting said input data into output data for defining, in part, said secondary insurance policy, said secondary insurance policy being independent in effect from and without affect to said primary insurance policy and any benefits provided under said primary insurance policy; and processing and converting said input data into said output data includes determining whether said primary insurer is a select primary insurer, said select primary insurer being an insurer said secondary insurer believes uses an acceptable underwriting evaluation, and determining whether said select primary insurer provided underwriting approval of said one or more persons for said primary insurance policy; and if said primary insurer provided underwriting approval of said one or more persons for said primary insurance policy, generating, as part of said output data, said secondary insurance policy.*

The prior art of record does not disclose, nor provide any teaching or suggestion of, at least the limitations to determining whether the primary insurer is a select primary insurer that the secondary insurer believes uses an acceptable underwriting evaluation, and to determining whether said select primary insurer provided underwriting approval of said one or more persons for said primary insurance policy to generate the secondary insurance policy. In other words, the prior art does not disclose, teach or suggest the secondary insurer relies on whether or not the select primary insurer has given an underwriting approval of the one or more persons for the primary insurance policy to generate the secondary insurance policy.

For similar reasons, the prior art of record does not disclose the method recited in independent Claim 66. More specifically, the prior art of record does not disclose, nor teach or suggest, at least the limitations to *determining whether said prior insurer provided an underwriting approval of said one or more persons for said previously issued insurance policy; and, if said prior insurer provided said underwriting approval of said one or more persons for said previously issued insurance policy, determining whether said prior insurer is a select prior insurer, said select prior insurer designated by an additional insurer as using acceptable underwriting standards; and, if said prior insurer is a select prior insurer, providing without underwriting said additional or replacement insurance policy to provide additional insurance.*

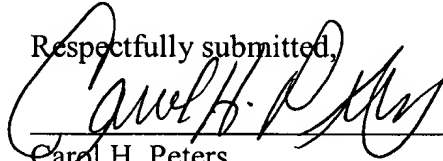

In addition, the prior art of record does not disclose, nor teach or suggest, at least the limitations of independent Claim 68 directed to *determining whether said prior insurer provided an underwriting approval of said one or more persons for said previously issued insurance policy*; and, *if said prior insurer provided said underwriting approval of said one or more persons for said previously issued insurance policy, determining whether said prior insurer is a select prior insurer, said select prior insurer designated by an additional insurer as using acceptable underwriting standards*; and, *if said prior insurer is a select prior insurer, providing said additional insurance policy to provide said one or more persons with additional insurance to cover said specified risk*.

Furthermore, the prior art of record does not disclose, teach or suggest the secondary or second insurance policy *being independent in effect from and without affect to said primary [or previously issued] insurance policy*, and *providing at least one benefit amount for said one or more persons independent of said primary [or previously issued] insurance policy and any benefits of said primary [or previously] insurance policy*, as required by Claims 64, 66, and 68.

Thus, for the foregoing reasons, Applicant respectfully submits the new Claims 64-72 are patentably distinct from the prior art of record.

Based upon the foregoing amendments and discussion, the present application is believed to be in condition for allowance and a notice to this effect is respectfully requested. Should the Examiner have any questions concerning this response, she is invited to telephone the undersigned.

Respectfully submitted,

Carol H. Peters

U.S. Securities and Exchange Commission

Division of Corporation Finance: Standard Industrial Classification (SIC) Code List

The Standard Industrial Classification Codes that appear in a company's disseminated [EDGAR filings](#) indicate the company's type of business. These codes are also used in the [Division of Corporation Finance](#) as a basis for assigning review responsibility for the company's filings. For example, a company whose business was Metal Mining (SIC 1000) would have its filings reviewed by staffers in A/D Office 4.

SIC Code	A/D Office	Industry Title
100	4	Agricultural Production-Crops
200	4	Agricultural Prod-Livestock & Animal Specialties
700	4	Agricultural Services
800	4	Forestry
900	4	Fishing, Hunting and Trapping
1000	4	Metal Mining
1040	4	Gold and Silver Ores
1090	4	Miscellaneous Metal Ores
1221	4	Bituminous Coal & Lignite Mining
1311	4	Crude Petroleum & Natural Gas
1381	4	Drilling Oil & Gas Wells
1382	4	Oil & Gas Field Exploration Services
1389	4	Oil & Gas Field Services, NEC
1400	4	Mining & Quarrying of Nonmetallic Minerals (No Fuels)
1520	6	General Bldg Contractors - Residential Bldgs
1531	6	Operative Builders
1540	6	General Bldg Contractors - Nonresidential Bldgs
1600	6	Heavy Construction Other Than Bldg Const - Contractors
1623	6	Water, Sewer, Pipeline, Comm & Power Line Construction
